VERMES Microdispensing acquired Lerner Systems

VERMES Microdispensing, a world leader in the design and manufacture of innovative microdispensing solutions, today announced its successful acquisition of Lerner Systems, a Germany-based international manufacturer of contact-free microdispensing systems.

VERMES Microdispensing has acquired the rights and assets to the entire Lerner Systems product lines, including electro-pneumatic and piezo-jet microdispensing valves, controllers and process equipment.

“We think it was an excellent transition for both parties. We will add the dispensing products developed and marketed by Lerner Systems to our portfolio of jetting systems”, says VERMES Microdispensing CEO, Juergen Staedtler.

Lerner Systems’ product lines are a perfect strategic fit with VERMES Microdispensing’s global position. They are an ideal addition to the fast growing company and its focus on dispensing challenging materials in industrial manufacturing processes and helping customers meet their quality and productivity targets.

The Lerner Systems team will join VERMES Microdispensing and add to the company's overall dispensing expertise.

"The global infrastructure, the worldwide sales network, the innovative research & development team and extensive technical competence of VERMES Microdispensing, as well as its constant expansion and growth offer an optimal new environment for the Lerner Systems team," states Semen Lerner, Managing Director of Lerner Systems.

The Lerner team brings decades of expertise in developing and manufacturing microdispensing solutions for a range of jetting valves.

"I am delighted to add Lerner Systems to our portfolio of microdispensing systems and solutions and look forward to welcoming the team. Their skills will support our goal for continued innovations," adds Juergen Staedtler.

A systematic integration plan has been implemented. The integration allows for the Lerner

Systems to become a new product line within VERMES Microdispensing. The portfolio includes electro-pneumatic as well as piezo-based valves and their controllers.

The systems are suitable for dispensing low- to high-viscosity liquids. The contact-free jet valves offer manufacturers a fast and easy way to create accurate, repeatable micro deposits for demanding dispensing processes.

The customers of Lerner Systems will now have access to the entire VERMES Microdispensing product range. They will receive a wide range of dispensing solution offerings of exceptional quality and reliability and the benefit of worldwide service and support.
