## VERMES Microdispensing moves into new premises to accommodate its expanding team

### Company expands and moves to new headquarters

VERMES Microdispensing is a world leader in the design and manufacture of innovative microdispensing concepts and systems for adhesives, silicones, greases, solvents and other fluids.

Today, the company announced the expansion of its German Headquarters and its move into new, own premises.

In order to support its growth the company will move into new offices in the technology park Holzkirchen, Munich Area at the beginning of 2019.

The company has set itself a target to become the number one provider of piezo-based microdispensing systems, but the current facilities are limiting the growth of the firm.

VERMES Microdispensing's new Headquarters in Southern Munich Area

Over the last few years, the successful microdispensing company has expanded significantly and the upcoming move to the Holzkirchen industrial center, is a result of its continued growth.

“We have a great, international team who each have very valuable experience and knowledge,” explains Juergen Staedtler, managing director and CEO. “We have almost doubled our staff within the last decade and as the business has expanded we have gradually outgrown our old office.”

“When choosing the new building site, it was important to us that we will not have to relocate into a different district but stay in the same neighborhood and only move few miles into the established industrial center of Holzkirchen, Greater Munich Area,” adds Juergen Staedtler.

In the next six months the firm expects again to have added several new positions to its global team, and that staffing is increasing in all areas of the company, from medical research and development to software development and special machine design.

The new offices will nearly triple current floor space, which matches the increased

requirements of VERMES Microdispensing’s expanding business.

With this move, the company’s headquarters will remain in the Southern Munich Area as it is a hub for the German High-Tech industry and home to the headquarters of some world’s top-10 industrial companies.

The new office building is surrounded by a life science and traffic ecosystem and an infrastructure which promotes a strong innovation culture.

This move offers an improved working environment to support clients and partners more effectively and efficiently, with space for outstanding ideas, and it is a proof of the board’s trust in the future growth potential.

From modernizing the office’s interior design to implementing innovative ways of working, this office relocation can be the impulse for giving the entire company a make-over.

VERMES Microdispensing will use this opportunity to introduce a new logistic system, new production facilities and an innovative customer support center.
